                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1561
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1621
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The predicted N-terminal AA sequence of PG-2a occurs at AA72. Since the ATG at bp 51 codes for the only inframe methionine preceding the N-terminal sequence of PG-2a, it is probable that the mRNA is translated with a 71AA pre-sequence that is subsequently cleaved to give a 41,828D mature protein.

Sequence 457 AA;	This polygalacturonase (PG) is encoded by plasmid clone pTOM6 which is used to produce antisense mRNA (with an inverted sequence to that of PG mRNA) which is Inserted into a vector used to transform plants which thereafter have altered ripening properties. The inverted sequence and the PG mRNA form a doubte-stranged structure which inhibits ex- pression of the PG mRNA. See also AAN80488. (Updated on 25-MAR-2003 to correct PA field.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This is the sequence of polygalacturonase from clone pTOM6. The clone was used to isolate the PG promoter in the construction of a vector encoding antisense RNA to the PG cDNA and PG gene. This would be useful to regulate the expression of the fruit softening enzymes in flowering and fruiting plants. Such antisense RNA would delay fruit softening. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to correct PN field.) (Updated on 27-MG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Recombinant DNA for flowering and fruiting plants e.g. tomatoes ripening control - comprises base sequence for transcription contg. inverted sequence of bases complementary to bases in anti sense ribonucleic acid encoding softening enzymes, or gene expression regulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 N-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides a new method for modifying pectin that involves providing a host having pectin methylesterase (PME) activity and polygalacturonase (PG) activity, transforming the host by silencing PG activity to provide an increased PME to PG ratio, preparing a PME extract from the transformed host, and using the PME extract to modify pectin. A PME modified pectin is useful for foodstuffs preparation, and to impart an increased functionality to food products such as yogurt, milk/fruit juice and whey drinks. PME is useful to reduce the number of ester groups in a pectin in a block-wise manner, and to de-esterify two or more adjacent galacturonic acid residue of a pectin on at least substantially all of the pectin chains. The present sequence represents a PG enzyme encoded by a pTOM6 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modifying pectin, for foodstuffs preparation, involves transforming host having pectin methylesterase (PME) and polygalacturonase (PG) activity by silencing PG activity, to increase PME to PG ratio.

The method is useful for forming an ester or amide bond between monomeric or polymeric ester or its acid or salt (e.g. homogalacturonan) and monomeric or polymeric alcohol or amine. It is useful for producing pectin-based polymers e.g., xyloglucan or D- or L-polylysine, useful for the slow release of compounds in the body e.g., heparin with anticoagulant or other pharmaceutical properties. The present sequence represents an endopolygalacturonase enzyme from tomato
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Formation of ester or amide bond between ester and alcohol involves treating the ester or its acid or salt with plant transester synthase in the presence of alcohol or amine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        31-AUG-2001; 2001US-0316777P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
seed production. The promoter is used to drive expression of a further nucleic acid sequence that results in prevention or reduction of anther dehiscence. For example, expression of the RNase barnase causes cell ablation, while expression of a plant hormone alters the developmental fate of a cell. Plants are produced that have phenotypically normal pollen grains, within phenotypically normal anthers, but in which the anthers do not dehisce and thus do not release the pollen grains. The system allows the female to be multiplied with the artificial male sterility gene in the homozygous state, since the female plant produces viable pollen. The system is suited to crops which have high seed multiplication, large amounts of pollen, and/or separate male and female inflorescences. These factors allow for easy collection of pollen from
                                                                                                                                                                                                                                                                                                                                                       thaliana. The invention relates to the use of the ESJ2A promoter to reduce dehiscence and to create male sterile plants for use in hybri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ESJ2A gene;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          non-dehiscing anthers, facile self-pollination and the minimisation of the area of plants that have to be self-pollinated manually. Such an ideal crop is the monocot maize, but the system is also applicable to e.g. wheat, barley, rice, fodder grass, banana, palm, orchid, tulip, lily, melon, cucumber, tomato, pepper and willow. It is also useful the avoidance or reduction of pollen allergens and may be effective the control of asthma caused by pollen release

In such actions a sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for the polypeptides or nucleic acids encoding them are useful as
